

Sumit Gupta

Software Engineer

sgupta98work@gmail.com | +1 716-748-9711 | [LinkedIn](#)

Summary

Software Engineer with 5+ years of experience designing, developing, and optimizing cloud-native, scalable applications using Java, Spring Boot, TypeScript, React, GraphQL, and AWS. Proven expertise in microservices architecture, event-driven systems, multi-tenant platforms, API integrations, distributed systems, security (OAuth 2.0, JWT, SAML), and DevOps practices including Docker, Kubernetes, CI/CD, and observability. Delivered high-impact solutions by leading cross-functional initiatives, modernizing enterprise platforms, improving system reliability, automating deployments, and supporting high-volume production environments while driving full-stack development, cloud infrastructure, performance optimization, and Agile software delivery for SaaS and enterprise applications.

Technical Skills

- Programming Languages:** Java, TypeScript, JavaScript, Python, SQL
- Backend & API Development:** Spring Boot, Microservices Architecture, REST APIs, GraphQL, Netflix DGS, Hibernate, JPA, Mongoose, Event-Driven Architecture
- Frontend & Mobile Development:** React, React Native (Expo), HTML5, CSS3, Shopify Liquid
- Databases & Caching:** MongoDB, PostgreSQL, Oracle Database, Redis, Memcached
- Cloud & Infrastructure:** AWS (EC2, RDS, S3, CloudWatch), Docker, Kubernetes, Load Balancing, Container Orchestration
- Security & Identity Management:** OAuth 2.0, JWT, SAML 2.0, PKCE, RBAC, Authentication & Authorization, Tenant Isolation, Secure API Design
- DevOps, CI/CD & Monitoring:** Jenkins, GitLab CI/CD, Git, CI/CD Pipelines, ELK Stack, Grafana, Structured Logging, Observability, Production Support
- Testing, Integration & Methodologies:** Jest, JUnit, Mockito, Integration Testing, Unit Testing, Apache Kafka, Salesforce Integration, HubSpot Integration, Shopify Integration, Agile Scrum

Professional Experience

Software Engineer, EduTrend

02/2026 – Present | USA

- Engineered multi-tenant platform capabilities using TypeScript, GraphQL, MongoDB, Redis, and Clerk, strengthening tenant-scoped security by 100% through RBAC-driven access controls.
- Developed configurable form-builder workflows across GraphQL resolvers, Mongoose services, and Expo React Native, reducing manual configuration effort by 50% for education teams.
- Optimized tenant lifecycle operations by enhancing database connection management, safe-delete workflows, and isolated tenant database cleanup, decreasing operational failures by 40%.
- Strengthened backend observability using CloudWatch-ready structured logging, request-context propagation, and sensitive-data redaction, accelerating production troubleshooting by 45% while supporting compliance.
- Expanded quality assurance through Jest unit/integration testing and Docker-based full-stack environments, increasing automated test coverage by 35% and streamlining local development.

Software Engineer, MiniOrange

07/2021 – 07/2024 | India

- Orchestrated delivery of 10+ cloud-based full-stack applications by leading a 12-member Agile team, accelerating release velocity by 40% through architecture governance and production ownership.
- Architected scalable Java/Spring Boot microservices, REST/GraphQL APIs, and Kafka-driven event workflows, increasing integration throughput by 50% across Salesforce, HubSpot, and Shopify ecosystems.
- Crafted customer-facing features using React, JavaScript, HTML/CSS, and Shopify Liquid, improving portal usability by 35% across dashboards, storefronts, and configuration interfaces.
- Transformed enterprise integrations by migrating REST APIs to GraphQL using Netflix DGS, reducing payload overhead by 45% and eliminating excessive client-server round trips.
- Strengthened platform resilience through OAuth 2.0, JWT, SAML 2.0, PKCE, AWS, Kubernetes, Docker, CI/CD, and Python automation, reducing production escalations by 60%.

Software Developer, Cognizant

01/2019 – 12/2020 | India

- Engineered Spring Boot microservices to automate insurance claim workflows, reducing claim processing time by 65%, enabling 500K+ monthly transactions while improving system scalability.
- Implemented Apache Kafka-based event-driven architecture, decreasing inter-service dependency by 50% and improving transaction processing throughput for high-volume insurance claims.
- Optimized Oracle database queries, indexing strategies, and Redis caching mechanisms, improving application response time by 40% and enhancing user experience.
- Automated build and deployment pipelines using Jenkins, Docker, and Kubernetes, reducing release effort by 60% while accelerating bi-weekly production deployments.
- Strengthened application security using OAuth 2.0, JWT, and centralized monitoring, reducing production incidents by 35% and achieving 99.9% system availability.

Education

Master of Science in Computer Science

University at Buffalo

01/2026 | USA

Bachelors in Electronics and Communication Engineering

National Institute of Technology

07/2021 | India

Projects

Radiant Clothing

- Engineered a full-stack e-commerce application using React.js, Redux, GraphQL, and Firebase, implementing Firebase Auth, Stripe payments, Redux-Saga state management, Jest/Enzyme testing, and VPS deployment.

Multi-Tenant Customer Support Platform

- Architected a multi-tenant backend using Spring Boot 3, PostgreSQL, Kafka, Redis, and MinIO, implementing RBAC, JWT authentication, OpenTelemetry, Docker Compose, Testcontainers, and GitHub Actions CI/CD.

Job Search Control Plane

- Engineered a Generative AI platform using Python, FastAPI, PostgreSQL, Next.js, and RAG architecture, integrating Claude API scoring to reduce manual screening from hours to minutes.
